Proceedings are registered at the [ISSN Portal](#).

Proceeding from the fact that most economic progress is based on innovation, the Collection of Papers is aimed at publishing theoretical, empirical and applied articles from all areas of economics that basically contain innovative approaches and solutions, which are a product of the knowledge economy.

Innovations and changes within the framework of the fourth industrial revolution are best known in the world of new technologies that shape the global economic and technological structure, international and local markets, as well as the entire sociocultural system. This Compendium addresses most of the consequences that technological change brings to the economy and society, but innovation is not reserved for technology alone. Innovations can have a social, media, cultural and socio-psychological character when they are not only a product of information technology. Proceedings are published once a year, no later than the end of October each year, in printed and electronic versions. The language of the publication is English. The articles submitted to the Editorial Board should include the topic Proceedings are, with the names and surnames of authors (co-authors), scientific titles, affiliations and positions, telephone numbers and e-mail addresses.

We invite authors interested in publishing their works in this Collection to submit their materials in digital form to the email address: novi.economics.institut@gmail.com

The author is responsible for ensuring the authenticity of data, facts, quotes and other information. Editorial boards may publish articles for discussion without sharing the author's views. It is recommended to submit articles in English. Authors from Bosnia and Herzegovina and neighboring countries should submit papers in English and their mother tongue. The structure of the article should include: title, abstract, keywords, introduction, subtitles, conclusion and bibliography. Common subheadings are: introduction, literature review (theoretical framework), methodology (research methods, data, research model), data and sources, empirical result (empirical findings),

discussion and conclusion. In writing their articles, authors should apply the standard of scientific methodology for scientific publications.

The abstract (200-250 words) should reveal the main idea of the paper and the results of the research. The abstract must contain enough information for readers to judge the nature and importance of the topic. It should summarize the article's objectives, methodology, results and conclusions. In order to increase the visibility of the article, keywords and phrases should be repeated in the abstract, avoiding unnecessary repetition. Literature is arranged alphabetically by author and chronologically for articles by the same author. Literature is cited by examples for books, journals, and other sources.

Plagiarism policy

Regarding the originality of the papers, we draw attention to the following: the Proceedings are in accordance with the principles governing intellectual property rights, discouraging any attempt at plagiarism, regardless of its forms - involuntary, self-plagiarism, willing appropriation of other people's ideas, etc. The author must take appropriate measures to avoid any of these situations regardless of nature and severity. Please note that we use specialized anti-plagiarism software used by other prestigious institutions to check the articles received. In order to ensure the objectivity of the results, when checking the text, we exclude references, title and authors' names. The editor reserves the right to reject the article from the beginning and to refuse publication of future articles by authors who have committed plagiarism.

All other articles will be internationally and anonymously reviewed in three places. Author names are anonymous to reviewers. It is the authors' responsibility to ensure that the submitted article has not been previously published and is not being considered for publication elsewhere. The editors reserve the right to methodologically adapt the article to the Collection are propositions and standards to mail:

novi.economics.institut@gmail.com

with the aim to highlight a positive impact of modern technologies on the economy and society.

Rejection Rate

- 53.05% articles - completely rejected,
- 46.95% articles - accepted for publication following mandatory implementation of modifications suggested by peer reviewers.
